

Devon K. Chen

BACKEND & DISTRIBUTED SYSTEMS ENGINEER

Email: d.chen@example.io Phone: (555) 342-9011 Location: Seattle, WA GitHub: github.com/dchen-backend

Backend Engineer focused on high-throughput distributed systems, databases, and microservices architecture. Expert in Go, Java, gRPC, and cloud platform infrastructure with 6+ years in fintech and data infrastructure.

CORE TECHNICAL EXPERTISE

Languages: Go, Java, C++, SQL, Rust

Databases: PostgreSQL, Cassandra, DynamoDB, CockroachDB

Distributed Systems: Apache Kafka, gRPC, Redis, RabbitMQ

Infrastructure: Kubernetes, Terraform, AWS, Prometheus, Jaeger

WORK EXPERIENCE

Senior Backend Engineer — FlowData Infra

2022 – Present

- Engineered a streaming ingestion service in Go using Apache Kafka processing 10B+ events daily with sub-second latency.
- Designed horizontally scalable caching infrastructure with Redis clusters, reducing primary database load by 60%.
- Built distributed tracing pipelines using OpenTelemetry and Jaeger to diagnose inter-service bottlenecks across 40+ microservices.

Backend Software Engineer — PayPulse Financial

2019 – 2022

- Developed double-entry transaction engines in Java (Spring Boot) meeting PCI-DSS compliance standards.
- Implemented gRPC interfaces replacing REST endpoints, resulting in a 35% reduction in intra-cluster network bandwidth.
- Automated database migration scripts and zero-downtime schema migrations for PostgreSQL databases.

Software Developer — Nexus Cloud Solutions

2018 – 2019

- Built REST APIs for IoT metrics gathering using Go and AWS DynamoDB.

CERTIFICATIONS

Confluent Certified Developer for Apache Kafka (CCDAK)

Issued Nov 2023

Oracle Certified Professional: Java SE 17 Developer

Issued Mar 2021

EDUCATION

M.S. in Computer Science — University of Washington

2016 – 2018
